skilled in the art to conceive of configuring the invention that is set forth in claims 1 and 2 by substituting the method that is disclosed in document 2, wherein the lateral ends of the window glass, the mounting surface of the window glass and three parts on the outside thereof are illuminated, for the method that is disclosed in document 1, wherein the mounting surface of the window glass and two parts on the outside thereof are illuminated.

The invention set forth in claims 3 and 4 does not involve an inventive step in the light of document 1 and document 2 cited in the international search report.

Document 1 discloses the invention of a "device for mounting the window glass of an automobile," whereby it is possible to mount window glass that curves in the lateral direction to the vehicle body of an automobile with a high degree of precision.

Meanwhile, document 2 discloses the invention of a "device for mounting the window glass of an automobile" wherein the lateral ends of the window glass, the mounting surface of the window glass and three parts on the outside thereof are illuminated in order to mount the window glass of the automobile with a high degree of precision.

Therefore, it would have been easy for a person skilled in the art to conceive of configuring the invention that is set forth in claims 3 and 4 by substituting the mounting device that is disclosed in document 2, which illuminates the lateral ends of the window glass, the mounting surface of the window glass and three parts on the outside thereof, for the mounting device that is disclosed in document 1, which illuminates
